About Me

Software engineer who ships things people actually use. I build and own production systems on AWS at one of Latin America's largest banks, and outside of work I founded a **23,000-member** developer community and reach **9,500+ subscribers** on YouTube. Focused on systems architecture, and I build side projects because I can't help it.

Experience

Software Engineering Intern Sep. 2025 – Present

Itaú Unibanco *São Paulo, Brazil*

- Supported teams in modernizing internal platforms by building **Angular micro-frontends**, making applications more modular and scalable
- Built and shipped an internal **end-to-end** product used across multiple business units at one of Latin America's largest banks, owning it from architecture and technical decisions through to production
- Designed and deployed the full **AWS** infrastructure (ECS, Lambda, Athena, S3, RDS, IAM, VPC) behind a Python/Streamlit interface, delivering it scalable and secure
- Led **3 interns** on the project, coordinating technical delivery and alignment with business stakeholders

Robotics Educator Mar. 2023 – Jul. 2023

Instituto Federal de São Paulo *São Paulo, Brazil*

- Taught programming logic and robotics with **Arduino** to high school students, focused on building autonomous robots in **C/C++**
- Prepared teams for regional and national robotics competitions

Community & Audience

Servidor dos Programadores 2025 – Present

Founder & Administrator *Discord*

- Founded and lead a Brazilian developer community, grown from zero to more than **23,000 members**
- Organize online events and in-person meetups in São Paulo — **4 meetups** averaging **70 attendees** each — to widen access to tech education

Audibert 2025 – Present

Technology Content Creator *YouTube*

- Grew a programming channel to **9,500+ subscribers** and **219,000+ views**, explaining technical concepts in a clear, accessible and engaging way

Projects

Grux | Node.js, Discord.js, MongoDB, WebSocket, REST API 2026

- Service that exposes real-time Discord profile and presence data through a **REST API and WebSocket**, so client apps get live presence without touching the Discord gateway themselves
- Holds a persistent gateway connection behind an in-memory cache layer, serving reads without hitting Discord's rate limits
- Available at: github.com/matheusaudibert/grux

Newsletter Bot | Node.js, Discord.js, API 2026

- Official tech news Discord bot for **Filipe Deschamps**, one of Brazil's biggest tech content creators, delivering daily technology updates
- Running in more than **100 Discord servers**
- Available at: github.com/matheusaudibert/newsletter-bot

Aprova | Python, Streamlit, Gemini 2025

- **Winner of the Alura + Google Hackathon**: online platform to prepare students for São Paulo's most competitive university entrance exams
- Awarded a **full scholarship** to study at FIAP as the grand prize
- Available at: github.com/matheusaudibert/projeto-aprova

Education

FIAP Aug. 2025 – Aug. 2028

Bachelor's in Software Engineering *São Paulo, Brazil*

Skills

Languages: Python, TypeScript, JavaScript, SQL, C/C++
Backend: Node.js, REST APIs, WebSockets, Streamlit, Swagger/OpenAPI
Frontend: React, Next.js
Cloud & Infra: AWS (ECS, Lambda, Athena, S3, RDS, IAM, VPC), Terraform, Docker, CI/CD
Databases: MySQL, MongoDB
AI: AI APIs, LLM integration, AI-assisted development (Claude Code, Devin)
Practices: Software architecture, OOP, DDD, unit & integration testing, Scrum, technical docs
Spoken: Portuguese (native), English (advanced)
