About Me

Full Stack Software Engineer with 1 year of experience, focused on systems architecture and software development with hands-on experience in cloud environments, and engaged with the tech community in Brazil. Currently seeking an opportunity as a Junior Software Engineer.

Skills

Languages: Python, JavaScript, C#, Node.js, SQL
Frontend: Angular, React
Cloud & Infra: AWS, Terraform, Docker, CI/CD, Pipelines
Databases: MySQL, MongoDB, RDS, Redis
Tools: Git, GitHub, REST API, Swagger/OpenAPI
Concepts: Software Architecture, OOP, DDD, SDD, Serverless, Deploy, Testing, Scrum, Docs
AI: AI-Assisted Development, Claude Code, Devin
Spoken Languages: Portuguese (Native), English (Advanced)

Experience

Software Engineering Intern Sep. 2025 – Present
Itaú Unibanco *São Paulo, Brazil*

- Supported teams in modernizing internal platforms by building **micro-frontends** in **Angular**, making applications more modular and scalable
- Built an internal **end-to-end** product with impact across an entire business division, from architecture and technical decisions to alignment with business stakeholders
- Built the full infrastructure on **AWS** (ECS, Lambda, Athena, S3, RDS, IAM, VPC) with a Python/Streamlit frontend, ensuring a scalable and secure delivery
- Eliminated more than **90 hours of manual work per month** and fully modernized an entire business workflow, increasing team efficiency and productivity
- Led **3 interns** throughout the project, coordinating technical deliveries and business alignment

Projects

The Git Calendar | Python, FastAPI, Pillow, Redis, Vercel 2026

- API that turns a GitHub username into a **phone wallpaper** of the year's commits, with one dot per day colored by that day's contribution intensity
- Used as a phone wallpaper by more than **1,000 users**
- Available at: github.com/matheusaudibert/thegitcalendar

Newsletter Bot | Bot, Node.js, Discord.js, API 2026

- Official tech news bot for Filipe Deschamps, delivering daily updates on Discord
- Running in more than **100 servers** on Discord
- Available at: github.com/matheusaudibert/newsletter-bot

Aprova | Python, Streamlit, Gemini 2025

- Online education platform to prepare students for São Paulo's main university entrance exams, built for and **winner of the Alura + Google Hackathon**
- Awarded a **full scholarship** to study at FIAP as the prize for winning the hackathon
- Available at: github.com/matheusaudibert/projeto-aprova

Education

FIAP Aug. 2025 – Aug. 2028
Bachelor's in Software Engineering *São Paulo, Brazil*

Engagement

Audibert (YouTube) Aug. 2024 – Present
Technology Content Creator

- Grew a programming channel to more than **9,500 subscribers** and **219,000 views**, explaining technical concepts in a clear, accessible and fun way

Servidor dos Programadores (Discord) Feb. 2025 – Sep. 2026
Founder & Administrator

- Founded and led an online programming community with more than **25,000 members** on Discord
- Organized online and in-person classes and events in São Paulo, making tech education more accessible
